ENTERPRISE AI ADVISORY & SYSTEMS ARCHITECTURE

Dubai Police Agentic AI Media Operations

Requirements Understanding & Strategic Alignment Queries for Q&A Session

REF NO: DP-AI-MEDIA-QA-2026
DATE: October 2026
STATUS: Client Review Draft

CORE OPERATING PRINCIPLE: GUARANTEED ZERO AUTO-PUBLISH

Every AI-generated artifact remains in a staged draft state until explicitly verified, linguistically validated, and authorized through defined multi-tier Dubai Police human approval hierarchies.

01 Solution Scope & Functional Agent Architecture

The proposed solution establishes a human-governed multi-agent operational platform to accelerate official communications, standardize public campaign distribution, adapt outdoor screen formats, and safeguard public trust against emerging misinformation.

Agent 1: Media Release Agent — NLP & Translation

- Ingests raw operational facts, police logs, and incident briefs.
- Generates high-precision Arabic drafts adhering to official UAE government protocol and penal terminology.
- Produces idiomatic, context-accurate English adaptations.
- Auto-generates verified social captions, excerpts, and official campaign hashtags.

Agent 2: Campaign Creative Agent — Ideation & Strategy

- Generates structured creative concepts for public awareness (e.g., cyber safety, traffic rules, narcotics prevention).
- Develops memorable slogans, key messages, and teaser sequences.
- Structures comprehensive visual creative briefs for media production.
- Aligns campaign messaging with seasonal events and Dubai Police goals.

Agent 3: Screen Adaptation Agent — Visual Automation

- Ingests approved master visual artwork across campaigns.
- Maps assets against Dubai digital screens (DOOH, LED highway banners, station kiosks, portrait totems).
- Enforces visual safe zones, legibility distances, and aspect ratios.
- Produces multi-screen verification preview sheets for final sign-off.

Agent 4: Monitoring Intelligence Agent — Sentiment & Defense

- Continuously monitors authorized digital news streams and social feeds.
- Performs sentiment classification and public safety topic tracking.
- Detects velocity spikes in emerging rumors, fake news, or misinformation.
- Generates structured situational alert dossiers and escalation summaries.

02 • MULTI-TIER HUMAN-GOVERNED VALIDATION PIPELINE

1. Prompt Vault: Approved templates & RAG context	2. Safety Gateway: Azure AI Content Safety screening	3. Reviewer Check: Editorial & legal fact verification	4. Approver Gate: Authorized final sign-off & release

TECHNICAL Q&A SESSION AGENDA

Technical Queries & Scope Clarifications (Part 1)

Key discussion points on AI capabilities, digital screen workflows, and external data dependencies.

TARGET: Dubai Police Communications & IT
FOCUS: Accuracy, Media Assets & Feeds

Category A: AI Generation, Linguistic Standards & Accuracy

CRITICAL PATH

A.1 Arabic Dialect, Governmental Tone & Protocol Calibration

Dubai Police communications follow strict protocols regarding UAE government administrative phrasing, official rank honorifics, and exact penal code legal citations. Out-of-the-box LLMs typically default to generic Arabic.

> **Query:** Will Dubai Police provide an official editorial style guide, terminology glossaries (prohibited vs. mandatory phrasing), and an archive of 500+ approved historical releases to calibrate the model's retrieval-augmented context (RAG)? Who within the communications team will act as the linguistic sign-off authority?

A.2 Definition and Measurement of the "97%+ Target Accuracy" Metric

Section 3.1 commits to a 97%+ accuracy rate. In generative natural language and creative copy, subjective editorial tweaks can blur the boundary of factual error versus stylistic preference.

> **Query:** Is the 97% accuracy metric measured strictly on *deterministic correctness* (dates, locations, law article numbers, casualty figures, absence of hallucination) or on *first-pass acceptance without wording revisions*? What specific benchmark dataset will govern UAT sign-off?

A.3 Scope of Visual Output for Agent 2 (Campaign Creative)

The document specifies visual concept generation and teaser bundles, but Azure OpenAI (GPT-4o) natively produces structured text, not production-ready graphic compositions.

> **Query:** Is Agent 2 expected to provide *structured text briefs, storyboards, and prompts for human graphic designers*, or should the platform directly render and export raster/vector image files using generative image models (e.g., DALL-E, FLUX, Stable Diffusion)?

Category B: Agent 3 (Screen Adaptation) Technical Scope

MEDIA PIPELINE

B.1 Source Artwork Formats & Automated Rendering vs. Spec Guides

Digital out-of-home (DOOH) screens across Dubai vary widely across highway billboards, vertical portrait totems, and interactive kiosk resolutions.

> **Query:** What are the primary input formats provided by your designers (e.g., layered PSD, Figma, AI, TIFF, or MP4/HTML5 video)? Is Agent 3 required to *programmatically render and composite the final multi-resolution output files*, or export *dimensioned transformation preview sheets* for designer execution?

B.2 Digital Signage CMS Integration

Distributing adapted screen assets to physical billboards typically relies on specialized signage software.

> **Query:** Does Dubai Police utilize an existing central Digital Signage CMS (e.g., Scala, Broadsign, Samsung MagicINFO), and is direct API publishing to this network required, or will the platform package zip files for manual handoff?

Category C: Agent 4 (Monitoring Intelligence) & Data Licensing

EXTERNAL DEPENDENCIES

C.1 Access to Commercial Social Listening Firehoses & APIs

Sections 4.3 and 7.4 categorize third-party social listening platforms (Brandwatch, Sprinklr, Meltwater, X/Twitter Enterprise API) as customer-provided and excluded from vendor scope.

> **Query:** Does Dubai Police currently hold enterprise subscriptions and active API keys for external listening feeds? If commercial APIs are unavailable, what specific authorized data sources (e.g., public RSS, official portal comment feeds) should Agent 4 ingest?

C.2 Misinformation & Rumor Detection Thresholds

Identifying false narratives requires baseline facts to compare against public posts.

> **Query:** Will Dubai Police maintain an internal repository of verified facts for the agent to reference, or should alerts be driven strictly by statistical velocity anomalies and negative sentiment spikes across tracked keywords?

TECHNICAL Q&A SESSION AGENDA

Technical Queries (Part 2) & Discussion Agenda

Infrastructure portability, enterprise identity, workflow controls, and structured meeting agenda.

SESSION LENGTH: 60 Minutes
OBJECTIVE: Scope Sign-Off & Action Plan

Category D & E: Integrations, Hosting & On-Premises Migration

INFRASTRUCTURE

D.1 Identity, Access Control & DAM Archives

The platform requires integration with enterprise identity and digital asset repositories.

> **Query:** For Microsoft Entra ID (Azure AD), does Dubai Police support SSO with MFA via OIDC or SAML 2.0? Does Dubai Police operate an existing Digital Asset Management (DAM) system that requires bidirectional sync for approved photography and video b-roll?

E.1 Azure UAE North Compliance & Future On-Premises GPU Readiness

Section 2.3 emphasizes future migration readiness to Dubai Police-owned private infrastructure. However, the solution relies on cloud-managed Azure AI APIs (Azure OpenAI, Azure AI Vision, Content Safety).

> **Query:** Is initial hosting in Azure UAE North fully cleared under Dubai Police data classification policies? In the event of a transition to an air-gapped on-premise datacenter, will Dubai Police supply dedicated local GPU infrastructure (e.g., NVIDIA H100 clusters) to host open-source Arabic foundation models (e.g., Jais, Falcon)?

Category F: Governance Workflows & Audit Retention

COMPLIANCE

F.1 Dynamic Routing vs. Fixed Linear Approvals

Standard media releases may require fewer checkpoints than high-visibility public safety crisis announcements.

> **Query:** Does Dubai Police require a fixed linear approval chain (Creator → Reviewer → Approver), or dynamic conditional routing where crisis topics automatically escalate to higher command leadership? What are the mandatory retention periods for audit trails and prompt change histories?

03 Recommended Agenda for 60-Minute Alignment Call

Time	Discussion Module	Key Deliverables & Outcomes
00:00 – 00:10	**Introductions & Scope Alignment**	Confirm overall objectives, key business priorities, and project governance structure.
00:10 – 00:25	**AI Capabilities & Linguistic Standards**	Review Arabic dialect guidelines, RAG reference samples, and 97% accuracy benchmark definition.
00:25 – 00:40	**Media Pipeline & Data Dependencies**	Clarify Agent 3 screen rendering formats and confirm access/licensing for Agent 4 social listening feeds.
00:40 – 00:50	**Security, Identity & Infrastructure**	Validate Entra ID integration, Azure UAE North compliance, and long-term on-prem GPU roadmap.
00:50 – 01:00	**Governance, Next Steps & Action Items**	Agree on approval hierarchy matrices, assign stakeholder owners, and set delivery milestones.

Document Notice: Prepared strictly for client consultation and scope calibration. All technical details subject to joint review.
