TENCORE DIGITAL LABS

Securing India's Digital Future Directly on the Device

SOVEREIGN EDGE AI • CYBERSECURITY • FRAUD PREVENTION

About Us

Building a safer digital future through intelligent, indigenous and privacy first technology.

TenCore Digital Labs Private Limited is a deep-tech company building secure, scalable and privacy first digital solutions. With expertise in cybersecurity, on-device AI/ML, fraud detection and enterprise software, TenCore protects individuals and organisations from evolving digital threats while enabling smarter business operations.

Its flagship platform, Safety Setu, detects UPI fraud, malicious applications, phishing links and unauthorised screen-sharing activity directly on the user's device delivering real time protection without transferring sensitive data to the cloud.

TenCore is transforming digital security from reactive protection into real time, on device prevention.

Our Vision

To become India's trusted digital safety layer and a globally recognised leader in sovereign, on device cybersecurity solutions.

Our Mission

To make advanced digital protection accessible to every individual and organisation through indigenous, intelligent and privacy-first technology.

PROBLEM STATEMENT

As digital adoption accelerates, cybercriminals are moving faster than traditional security systems.

India's rapid shift toward digital payments has created new opportunities for sophisticated cyber fraud. Traditional cloud dependent security tools often detect threats too late, expose sensitive data and remain inaccessible to regional-language users leaving individuals and enterprises vulnerable to evolving digital attacks.

Digital India needs protection that identifies and stops threats instantly directly on the user's device.

Rising Payment Fraud:

UPI users face phishing links, fake applications, screen-sharing scams and social-engineering attacks.

Delayed Threat Detection:

Cloud-dependent security systems often respond only after sensitive information has already been exposed.

Privacy Vulnerability:

Uploading personal and financial data to external servers increases privacy and data-sovereignty risks.

Limited Accessibility:

Many security tools lack regional-language alerts and simple guidance for first-time digital users.

OUR SOLUTION

Security That Acts Before Fraud Happens

TenCore's Safety Setu is a privacy first, on device cybersecurity platform that identifies and blocks digital threats in real time. It protects users from UPI fraud, malicious applications, phishing links and unauthorised screen sharing without transferring sensitive data to external cloud servers.

From detection to prevention, Safety Setu protects every digital interaction at its source.

Real Time Threat Detection:

Identifies suspicious activities and emerging threats in under 15 milliseconds.

On Device Protection:

Processes sensitive information locally, enabling faster response and stronger data privacy.

Fraud Interception:

Detects malicious APKs, phishing links, screen sharing scams and payment fraud attempts.

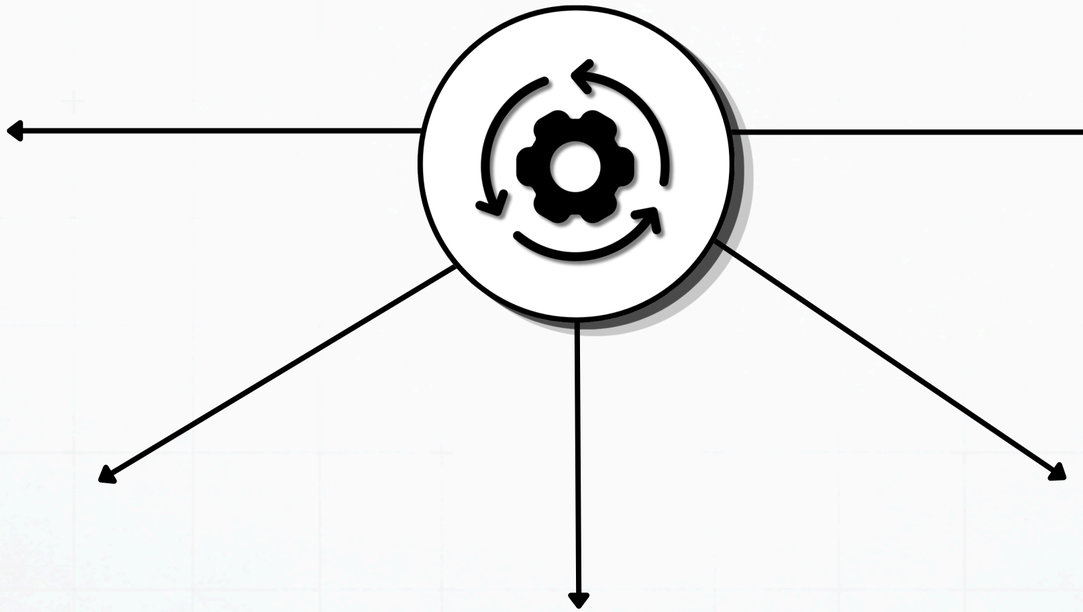
Offline Security:

Continues protecting users even with limited or unavailable internet connectivity.

HOW SAFETY SETU WORKS

Instant detection. Local processing. Zero cloud exposure.

Continuous Monitoring:
Monitors suspicious applications, links, payment activity and screen sharing behaviour.



Fraud Prevention:
Blocks or interrupts harmful actions before financial or personal data is compromised.

On Device AI Analysis:
Processes threat signals locally without sending sensitive user data to the cloud.

Instant Threat Detection:
Identifies fraudulent or malicious activity in under 15 milliseconds.

Multilingual Alerts:
Warns users through visual and voice notifications in four regional languages.

WHY NOW?

The Urgency for Smarter Digital Protection

Rapid Digital Payment Growth:
Expanding UPI adoption is increasing the need for stronger and faster fraud protection.

Evolving Cyber Threats:
Phishing, malicious APKs and screen sharing scams are becoming increasingly sophisticated.

Privacy and Data Sovereignty:
New regulations are driving demand for indigenous, privacy-first cybersecurity solutions.

Rise of Edge AI:
On device intelligence now enables instant, offline threat detection without sharing sensitive data with the cloud.

The next generation of cybersecurity must be instant, intelligent and built where the risk begins on the device.

MARKET OPPORTUNITY

Marketsandmarkets

SAM (Serviceable Available Market)
₹37,018 crore

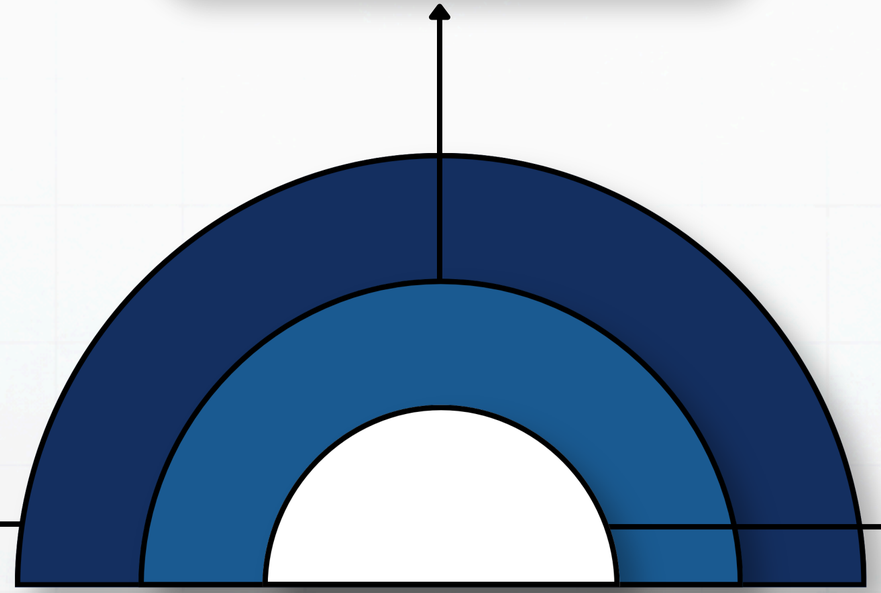
India's cybersecurity product market.

TAM (Total Addressable Market)
₹18.89 lakh crore

Global cybersecurity market opportunity.

SOM (Serviceable Obtainable Market)
₹370 crore

Indicative five year target based on capturing 1% of SAM.

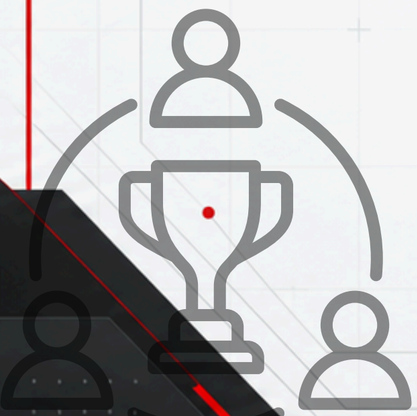


COMPETITIVE MOAT

Why TenCore Stands Apart

Privacy at the core, intelligence at the edge and protection at the moment it matters.

Competitive Advantage	TenCore's Value
On Device Intelligence	Detects threats locally without transferring sensitive user data to external servers.
Ultra-Fast Detection	Analyses risk signals in under 15 milliseconds for immediate intervention.
Offline-First Protection	Continues protecting users even with limited or unavailable internet connectivity.
Multilingual Accessibility	Provides visual and voice alerts in Hindi, Marathi, Gujarati and English.
Enterprise Integration	Offers scalable SDK and API integration for banks, fintechs and digital platforms.



REVENUE MODEL

Multiple Scalable Income Streams

One core security engine monetised across consumers, enterprises, institutions and connected devices.

Consumer Subscriptions:

₹999 annual premium plan for advanced fraud protection and digital safety features.

Enterprise Licensing:

SDK and API licensing for banks, fintech companies and digital payment platforms.

Strategic Partnerships:

Revenue from government projects, telecom partnerships and smartphone OEM pre installations.

SaaS Solutions:

Recurring monthly or annual subscriptions for TenCore's enterprise software platforms.

SWOT ANALYSIS

Strengths

- *Indigenous, privacy first cybersecurity platform*
- *Ultra fast on device threat detection*
- *Offline protection with zero cloud telemetry*
- *Multilingual alerts for wider accessibility*

Weaknesses

- *Early stage product and limited brand visibility*
- *Requires extensive device level testing*
- *Dependence on enterprise and institutional adoption*
- *Compliance and certification requirements*

Opportunities

- *Rapid growth of UPI and digital payments*
- *Rising demand for fraud prevention solutions*
- *Partnerships with banks, fintechs, telecoms and OEMs*
- *Increasing preference for sovereign cybersecurity products*

Threats

- *Rapidly evolving cyberattack techniques*
- *Changes in mobile operating system permissions*
- *Long enterprise procurement and integration cycles*
- *Competition from established global security companies*

STP ANALYSIS

Segmentation

- ***Individual Consumers:*** *Smartphone and UPI users, senior citizens, first time digital adopters and users vulnerable to phishing, malicious applications and screen-sharing fraud.*
- ***Financial Institutions:*** *Banks, fintech companies, digital payment platforms, NBFCs and insurance providers requiring integrated, real time fraud detection.*
- ***Technology Partners:*** *Telecom operators, smartphone manufacturers and application developers seeking embedded cybersecurity through SDKs and APIs.*

Targeting

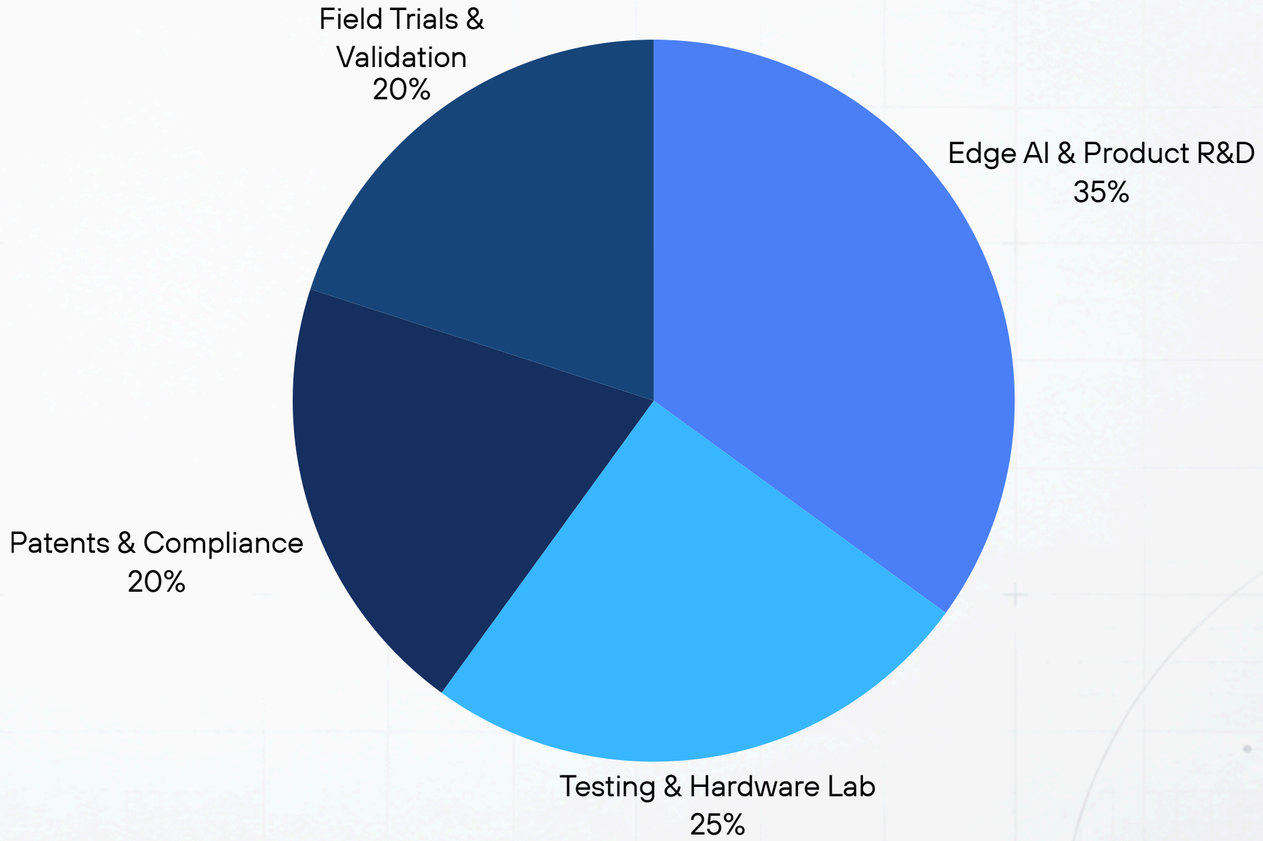
- ***Primary:*** *Banks, fintech companies and high risk UPI users requiring real time fraud prevention.*
- ***Secondary:*** *Telecom operators, smartphone manufacturers, government agencies and digitally underserved users.*

Positioning

TenCore is positioned as an indigenous, privacy-first cybersecurity company delivering ultra fast, multilingual and on-device fraud protection without cloud dependency.

FUND UTILISATION

Capital will be deployed to transform validated technology into a secure, compliant and commercially scalable cybersecurity platform.



LEADERSHIP

Devendra Vaja
Founder & Principal Systems Architect

Devendra Vaja brings over 24 years of experience in embedded systems, software architecture, kernel device drivers and Android development across India, Japan and the United States. His expertise in firmware, micro-kernel architecture and low latency on device processing forms the technological foundation of TenCore's privacy-first cybersecurity solutions.

Combining deep system-level engineering expertise with a mission to build indigenous and scalable digital security technology.
