Version 1.0 • September 2026

The Silent Revenue Leak in Insurance Agencies

Manual due lists, missing phone numbers, and delayed outreach cause up to 35% in lost renewal commissions.

Current Operational Friction

AGENCY BOTTLENECKS

- **15–30 Hours Lost in Manual Entry:** Agency staff manually type hundreds of multi-page tabular PDF due lists (LIC, private insurers) into Excel.
- **The 'Zero-Contact' Trap:** Insurer due lists provide policy numbers and dues, but zero phone numbers or emails — breaking instant outreach.
- **Monolingual English Friction:** English-only SMS reminders suffer a 65% drop in response from policyholders across Bharat.
- **Lapsed Policies & Lost LTV:** Missed grace periods lead to permanently lapsed policies, loss of trail commissions, and customer churn.

The InsuranceSetu Solution

AUTOMATED REVENUE CRM

- **1-Click Multi-Page PDF Ingestion:** Ingest complex tabular due lists with sub-second extraction and mathematical audit validation.
- **2-Tier Indian Phonetic Matcher:** Instantly links policy numbers to phone contacts using fuzzy soundex algorithms tailored for Indian names.
- **Multilingual WhatsApp & Email:** Automated, personalized reminders in Hindi, Marathi, Gujarati, and English with branded PDF receipts.
- **Customer 360 & Maturity Radar:** Consolidates multi-policy families and automatically flags upcoming policy maturities for claim advisory.

The 4-Step Intelligent Renewal Pipeline

From raw insurer PDF statements to verified WhatsApp renewal payments in under 60 seconds.

1. Upload & Ingest Dues

Drag and drop raw insurer due lists (PDF, Excel, CSV).
Mathematical verification ensures 100% precision:
 $(\text{Installment} \times \text{Dues}) + \text{GST} == \text{Total}$.

2. Auto-Match Contacts

Upload phonebook (VCF/CSV). Our 2-tier phonetic
matcher connects policyholder names with mobile
numbers even with spelling variations.

3. Unified Customer 360

Group policies by family head. View term, health, ULIP,
and endowment holdings on one dashboard with
upcoming maturity alerts.

4. Omnichannel Outreach

Trigger personalized WhatsApp & email reminders with
agency letterhead, payment links, and instant one-click
statement downloads.

Hybrid AI Architecture & Deterministic Precision

Built with zero-cloud compute cost for 80% of clean files, plus multimodal AI vision fallback for mobile photos.

Deterministic Math Validation

Every extracted policy due row is validated against: $(\text{Installment} \times \text{Dues}) + \text{GST} == \text{Total Due}$ before database commit, eliminating OCR errors.

4-Tier Hybrid Intelligence

Instant 50ms Python/pandas parser for digital PDFs, with multimodal AI vision fallback (Gemini/GPT-4o) for wrinkled smartphone bond photos.

100% Data Privacy & IRDAI Compliance

Multi-tenant tenant isolation with strict agency data ownership. Client data and contact books are never shared, sold, or co-mingled.
