

Mastermind for **AI in BBA**

Navigating the AI Revolution: From Undergraduate Management Student to
Future-Ready Business Leader.

Meet Your Instructor

Devendra Vaja

Founder: TenCore Digital Labs

Background: 24+ years building core systems across firmware, mobile architecture (Android), and tech-driven platforms globally.

Perspective: Bridging deep technology architecture with real-world business execution and consumer security dynamics.

Why a Technologist is Talking to BBA Students?

- AI isn't written by IT departments alone anymore—it dictates business strategy, ROI, and organizational structure.
- The gap between corporate strategy and technical execution is shrinking rapidly.
- Objective: To give you a pragmatic framework to leverage AI rather than fear it.

The Great AI Reality Check

Addressing your ongoing concerns, hype vs. reality, and what modern companies actually look for.

Will AI Take My Future Management Job?

The Myth

"AI will completely replace human managers, financial analysts, and marketers, leaving no roles for fresh BBA graduates."

The Reality

AI replaces routine operational tasks, not strategic judgment, empathy, negotiation, or contextual leadership.

The Opportunity

The job market won't be "Humans vs. AI", but rather "Humans using AI vs. Humans not using AI."

Interactive Exercise: The Prompt Challenge

Methodology: Live Show of Hands & Prompting

- ✓ Ask the hall: Who has used AI to write an assignment vs. build a business model?
- ✓ Give students a live 3-minute challenge: Prompt an AI model to solve a supply chain failure case study.
- ✓ Compare generic output vs. contextual management prompting.

Key Takeaway for BBA Students

Prompt engineering in business is essentially about structuring the correct operational constraints, financial boundaries, and customer goals. Your management curriculum provides the thinking framework; AI is just the accelerator.

00:40 – 00:60 (20 mins)

AI Across Core Business Pillars

How Finance, Marketing, Operations, and HR are transforming right now.

Modernizing Functions with AI

Finance & FinTech

Moving from manual Excel ledger checks to predictive cash flow analysis, automated risk scoring, and dynamic budgeting.

Marketing & Growth

Hyper-segmentation, personalized consumer journeys, real-time sentiment tracking, and high-velocity content strategy.

Operations & Supply Chain

Demand forecasting, inventory optimization, and automated vendor performance evaluation frameworks.

🕒 00:60 – 00:75 (15 mins)

The Managerial Edge

Building ethics, governance, and leadership traits that algorithms cannot replicate.

Ethics, Bias, and Risk Management

Why BBA Leaders Matter Here

Technologists build systems to scale; business managers must decide if they *should* scale them.

Understanding data privacy, algorithmic bias in hiring or loan approvals, and regulatory compliance is a core management responsibility.

The Core Skills to Cultivate

- Critical cross-functional evaluation of tech solutions.
- Managing human-AI collaborative workflows.
- Continuous adaptability and rapid unlearning.

⌚ 00:75 – 00:80 (5 mins)

Your 3-Step Action Plan

What you should do starting tomorrow morning as a final year BBA student.

Your Blueprint to Stand Out

1

Build a Daily Habit

Stop treating AI as a search engine. Use it as a sparring partner to critique your business plans and case studies.

2

Upskill in Data Literacy

You don't need to code in Python, but you must know how to interpret data dashboards and ask the right questions.

3

Showcase Projects

Include AI-assisted business proposals or workflow optimization projects in your portfolio before placement interviews.

⌚ 00:80 – 00:90 (10 mins)

Questions & Answers

Thank you for your energy and engagement! Let's discuss your future in an AI-powered business world.
