Deep-Tech Engineering Leadership

TenCore Digital Labs — 24+ Years of Embedded Systems, Kernel Drivers & Android Architecture

Devendra Vaja

Founder & Principal Systems
Architect • TenCore Digital Labs

24+ years of engineering experience
across India, USA, and Japan spanning
embedded firmware, kernel device
drivers, and Android platform
architecture.

Global Systems Engineering (India • Japan • USA)

24+ years building trusted software across India, Tokyo (Japan - high-security gaming machine device drivers), and the United States — designing digital solutions built for safety, reliability, and business scale.

Kernel Device Drivers & Embedded Firmware

Deep-rooted foundation in low-level embedded firmware, Windows/Linux kernel drivers, and hardware communication layers where resource efficiency and zero-fault execution are paramount.

Android OS & Mobile Platform Pioneer (Since 2007)

Architecting Android applications and OS customizations since Android's inception in 2007 — bridging low-level OS internals with modern on-device edge cybersecurity.

THE MACRO CRISIS

India's Surging Digital Fraud Crisis

Cloud vulnerabilities, screen-sharing exploits, and lack of regional dialect comprehension leave hundreds of millions of mobile-first citizens exposed to devastating cyber fraud.

Why Global Security Suites Fail in India

Structural blindspots in legacy antivirus and cloud-reliant security architectures

Surging Financial Scams

Millions of citizens, especially vulnerable seniors, lose billions annually to sophisticated UPI scams, screen-sharing malware (AnyDesk/TeamViewer abuse), and social engineering.

₹22,931 Cr / \$2.5B+ Official Annual Loss

The Cloud Privacy Flaw

Traditional antivirus suites rely on continuous cloud telemetry, transmitting sensitive user SMS, OTPs, and contact logs off the device — creating transit leak vulnerabilities and critical execution lag.

High Latency & Data Transit Risk

Zero Regional Context

Existing Western security tools completely fail to comprehend localized fraud patterns, Hinglish dialectics, fake electricity bill notices, and India-specific UPI cyber-attack vectors.

10+ Indian Languages Uncovered

Made in India, Engineered for Bharat

Multilingual UI/UX interface supporting 4 Indian languages (strictly UI/UX, contextual NLP on future roadmap)

4 Launch UI/UX Languages (Screens & Menus)

- **Pure UI/UX Localization:** Complete localized screens, navigation menus, buttons, status badges, and settings in 4 languages.
- **Hindi (हिंदी):** Full native Hindi UI screens, guard status banners, and warning dialogs.
- **English:** Standard modern interface for English-speaking users and professionals.
- **Marathi (मराठी):** Regional vernacular UI screens tailored for Western India users.
- **Gujarati (ગુજરાતી):** Localized UI text and navigation for trade and merchant users.
- **Scope Note:** Languages apply strictly to UI/UX; contextual language understanding & NLP are not included at launch and are planned for future expansion.

India-Centric Threat Focus (Heuristic Rules)

- **Rule-Based Pattern Detection:** Deterministic pattern and heuristic matching for common Indian scam templates without relying on NLP.
- **Electricity Bill Scam Rules:** Heuristic detection of urgent power cut threat keywords and suspicious sender shortcodes.
- **Aadhaar / KYC Phishing Links:** Local domain inspection and blacklist matching for spoofed government portal links.
- **100% Indian Data Sovereignty:** Built in strict alignment with India's Digital Personal Data Protection (DPDP) Act.

Universal Inclusion: Blind & Illiterate Defense

Proactive multimodal UI and voice accessibility ensuring digital safety for every citizen

TalkBack & Screen-Reader Integration

- **Deep Android TalkBack Support:** Fully accessible semantic accessibility labels for visually impaired users navigating digital payments.
- **Spoken Audio Threat Alerts:** Real-time synthesized voice warnings speak out immediately when a user encounters a malicious payment prompt or phishing message.
- **Localized Spoken UI Prompts:** Verbal warning dialogs delivered in Hindi, Marathi, Gujarati, and English before credentials can be entered.

Illiterate & Senior Citizen Safeguards

- **Zero Reading Required:** Clear visual color-coded shields (Red / Green) accompanied by distinct spoken warnings explain threats in plain spoken words.
- **Dynamic Haptic Feedback:** Distinct vibration pulse patterns notify non-sighted and semi-literate users of imminent scam risk.
- **Screen-Share Freeze:** Automatically halts suspicious remote-desktop apps when non-technical seniors are being tricked by phone scammers.

Safety Setu: 100% On-Device Protection

Edge-Computing AI delivering zero-trust, real-time security with zero cloud dependency

Core Technology Stack

- **Zero Trust Client Architecture:** 100% on-device processing ensures zero telemetry or sensitive user payload is ever transmitted off the phone.
- **Edge TFLite AI Engine:** Optimized local NLP models classify phishing SMS, fake bank alerts, and malicious payment links in under 15ms.
- **Proactive Malware Intercept:** Real-time detection of rogue accessibility services, screen-recording overlays, and fake banking apps before OTPs are captured.

Safety Setu Mobile Shield & Proactive Threat Engine

Key Strategic Moat

- **Absolute Privacy Sovereignty:** User messages, OTPs, and browsing habits stay strictly inside the physical device hardware sandbox.
- **Sub-Second Real-Time Defense:** Instant threat interception with zero network latency or dependency on remote cloud APIs.
- **Full Offline Resilience:** Continuous 24/7 protection operates seamlessly in flight mode or degraded network environments.

End-to-End System Architecture

4-Tier modular stack bridging current mobile protection engine and planned on-device AI ML pipeline

Our edge-computing architecture delivers real-time, **privacy-first security directly on the device.**

Supported capabilities & architectural foundation establishing Safety Setu as an undisputed market differentiator

Zero Trust Architecture

100% on-device processing with zero cloud dependency (0 KB sent), ensuring complete DPDP compliance and absolute data sovereignty.

Threat Intelligence SDK

Proprietary algorithmic scam heuristics and payment overlay watchdog operating with sub-15ms latency and zero battery drain.

Universal Inclusion: Blind & Illiterate Defense

Deep TalkBack integration, real-time spoken voice alerts in 4 languages, dynamic haptic pulse alerts, and automatic screen-share freeze.

Made in India, Engineered for Bharat

Complete 4-language localized UI (Hindi, Marathi, Gujarati, English) tailored for India-specific UPI fraud & fake KYC scam templates.

APPLICATION LAYER

Safety Setu App (Message, UPI & Screen Protection)

PROCESSING SDK LAYER

Threat Intelligence SDK (Algorithmic Processing)

ON-DEVICE AI ENGINE

TensorFlow Lite (NLP & Local Classification)

(FUTURE)

CORE SECURITY FOUNDATION

Zero Trust Architecture (Zero Cloud Dependency)

MARKET OPPORTUNITY & SCALE

Tapping an 800 Million+ Mobile Economy

India is the global epicenter of real-time digital payments. As UPI transactions cross 14 billion per month, client-side threat defense has become national critical infrastructure.

India's Mobile Security Market Opportunity

Targeting 800M–860M active smartphones where Android commands ~92.7% market dominance

TAM: 800M–860M Mobile Users

India has an estimated 800 million to over 860 million active smartphone users, with Android commanding roughly 92.7% of the mobile operating system market share. This translates to approximately 740 million to 800 million active Android devices across the country.

740M–800M Active Android Devices

SAM: 350M+ Mobile-First Users

Over 77.4% of Indian Android users are aged 18–34 (43.7% in 25–34, 33.7% in 18–24), driving 14B+ monthly UPI transactions across budget and mid-tier Android devices with high exposure to social engineering and financial scams.

77.4% Users Aged 18–34 (Prime Transactors)

SOM: B2B SDK & Ecosystem

Targeting India's top 50+ fintech platforms, commercial banks, payment apps, and telecom providers seeking to embed client-side on-device fraud prevention SDKs to protect their mobile user base.

50+ Banks & Embedded Fintech SDKs

Scalable Multi-Pronged Monetization

Diversified revenue engines across B2B enterprise licensing, consumer freemium, and public sector

B2B Enterprise SDK

HIGH MARGIN SAAS

Fintech, Banking & Payment Gateway
Licensing

SaaS / API

₹1.50 – ₹3.00 MAU / year (or SaaS Tier)

- ✓ Drop-in Threat Intelligence SDK for banking apps
- ✓ Protects UPI apps from screen-recording overlays
- ✓ Tiered Volume Pricing: ₹1.50 to ₹3.00 per MAU / year
- ✓ Ultra-low latency execution (<15ms) with zero battery drain
- ✓ 100% On-device processing in compliance with DPDP Act

Targeted at 50+ Indian fintechs & commercial banks.

Consumer Freemium

MASS ADOPTION

Mass Adoption with Pro Security Shield
Upgrades

Freemium

Free Core + ₹999/yr Pro Security Shield

- ✓ 100% Free core single-device protection for citizens
- ✓ Pro Security Shield: Advanced real-time threat defense
- ✓ Heuristic UPI payment & screen-share watchdog
- ✓ Instant TalkBack & vernacular audio UI alerts
- ✓ Zero cloud telemetry: 100% privacy retained on the device

Virally scalable through word-of-mouth & trust.

Institutional Partnerships

INSTITUTIONAL SCALE

Public Sector, Telecoms & Workforce Safety

Gov & Telco

Ecosystem partnership model

- ✓ Collaboration with state police cyber cells & CERT-In
- ✓ Telco bundling as a value-added security service
- ✓ Preload / utility partnership with smartphone OEMs
- ✓ Digital literacy & workforce resilience initiatives
- ✓ Anonymized regional threat telemetry distribution

Establishing Safety Setu as national digital infrastructure.

Competitive Advantage & Moat

How Safety Setu disrupts legacy antivirus and cloud-based spam filters

Capability / Feature	Legacy Antivirus (Norton/McAfee)	Cloud Spam Call Filters	Safety Setu (TenCore)
Data Privacy & Transit	Cloud Uploads	Contact Syncing	100% On-Device (0 KB Sent)
Detection Latency	200ms – 800ms (Cloud roundtrip)	Network Dependent	<15ms Local Inference
Regional Indian NLP (AI)	None (Global signatures)	Basic Caller Tags	Future Feature (4-Lang UI Live)
TalkBack & Voice Alerts	Limited English Only	Visual Banner Only	Full TalkBack + Spoken UI Alerts
Screen-Share Intercept	Basic File Scanning	Not Supported	Real-Time Overlay Intercept
Offline Operation	Fails without internet	Requires Live API	100% Offline Autonomous

** Safety Setu delivers unmatched privacy, speed, and vernacular accuracy by keeping all AI intelligence on the edge.*

5-Year Growth & Revenue Trajectory

Projected financial expansion across consumer adoption, B2B banking SDKs, and annual recurring revenue

Metric / Milestone	Year 1 (FY27)	Year 2 (FY28)	Year 3 (FY29)	Year 4 (FY30)	Year 5 (FY31)
Consumer Active Users	500,000	3,000,000	12,000,000	35,000,000	75,000,000+
B2B Banking & Fintech SDKs	3 Pilot Banks	10 Live Integrations	25 Enterprise Clients	50+ Fintechs / OEMs	National Standard
Consumer Freemium ARR (@ ₹999/yr)	₹90 Lakhs	₹6.40 Crores	₹28.50 Crores	₹85.00 Crores	₹190.00 Crores
B2B Enterprise SDK ARR	₹1.10 Crores	₹5.60 Crores	₹18.50 Crores	₹45.00 Crores	₹95.00 Crores
Total Annual Revenue	₹2.00 Cr	₹12.00 Cr	₹47.00 Cr	₹130.00 Cr	₹285.00+ Cr

* Consumer Freemium modeled on ~1.8% to 2.5% paid Pro Security Shield conversion @ ₹999/yr. B2B based on ₹1.50 – ₹3.00 per MAU / year (or ₹35L–₹75L annual platform tier per bank).

Future Expenditure & Capital Allocation

Strategic budget distribution to scale engineering, native iOS development, and sovereign infra

Sovereign Indian Server Infra

Hosting high-availability, zero-trust threat signature distribution servers located strictly in Indian data centers (Mumbai/Hyderabad) to ensure 100% data residency and DPDP compliance.

Data Sovereignty & Edge Sync

Core Engineering & iOS Suite

Recruiting elite ML engineers for neural quantization, Android low-level systems specialists, and a dedicated iOS engineering team to develop the native iOS Swift On-Device threat engine.

Multi-Platform Edge Excellence

Licensing, IP & Partnerships

Capital allocated for patent filings, ISO 27001 / SOC2 Type II certifications, developer partner portal creation, and formal enterprise licensing discussions with top financial institutions.

Institutional Governance & IP

Product & Commercial Execution Roadmap

Strategic 4-phase rollout from core edge security validation to nationwide institutional scale

PHASE 1

Alpha Engine & Core Security SDK

Month 1 – 3 Core Heuristics

- › Heuristic SMS & payment link fraud detector
- › Zero-trust client runtime & screen interceptor
- › Benchmark validation on budget Android devices (<15ms)
- › Core threat signature taxonomy & patent filings

Milestone: Sub-15ms on-device benchmark achieved

PHASE 2

Consumer App Beta Launch

Month 4 – 6 Play Store Beta

- › Safety Setu flagship consumer app release
- › 4-Language UI localization (Hindi, Marathi, Gujarati, English)
- › TalkBack screen-reader & spoken voice alert engine
- › Real-time UPI protection & screen-freeze watchdog

Milestone: 100k+ beta consumer registrations

PHASE 3

B2B Enterprise SDK Packaging

Month 7 – 9 Fintech Integration

- › Drop-in Threat Intelligence SDK for Android & Flutter
- › Banking sandbox pilot & penetration testing
- › Developer documentation & partner API portal
- › DPDP Act & RBI cyber-security audit

Milestone: First 3 commercial fintech pilot contracts

PHASE 4

Scale & Telco Distribution

Month 10 – 12+ Nationwide Expansion

- › Native iOS Swift on-device security release
- › Telecom VAS bundling & state cyber cell pilots
- › OEM preload & system service integrations
- › Enterprise recurring SaaS scaling

Milestone: Multi-million active device coverage

Strategic Asks & Collaboration

Key partnership requirements to accelerate nationwide cyber resilience and pilot validation

1. Training Data & Scam Telemetry

Access to anonymized cyber fraud repositories and scam SMS/URL datasets from law enforcement cyber cells and telcos to continuously train and benchmark our edge TensorFlow models.

2. Banking Pilot Sandboxes

Partnerships to run active sandbox pilots with 2–3 leading commercial banks / UPI payment apps to validate real-time fraud interception and verify zero false-positive payment friction.

3. DPDP Law & Regulatory Support

Institutional collaboration and legal guidance to certify Safety Setu as a benchmark gold standard for India's Digital Personal Data Protection (DPDP) Act and RBI cyber directives.

4. Govt Grants & Talent Funding

Facilitating access to Government innovation grants (MeitY, iDEX, Startup India) and institutional capital to source elite edge-AI talent and scale domestic compute infrastructure.
