

TenCore Digital Labs

Delivering Next-Generation On-Device AI Security

⚡ Built for India's Next Billion Mobile Users.

India's Surging Digital Fraud Crisis

Cloud vulnerabilities and lack of regional context expose millions to sophisticated scams

Surging Financial Scams

Millions of citizens, especially vulnerable seniors, lose billions annually to sophisticated UPI scams, screen-sharing malware, and social engineering. The official digital fraud figure is Rs.22,931 Cr / \$2.5bn

The Cloud Privacy Flaw

Traditional mobile security relies on constant cloud connectivity, exposing sensitive user data to transit leaks and causing critical execution latency.

Lack of Regional Context

Existing global security tools completely fail to comprehend localized fraud patterns, regional Indian languages, and specific regional cyber-attack vectors.

Our edge-computing AI delivers real-time, privacy-first security directly on the device.

Zero Trust Architecture

Real-time protection with zero cloud dependency.

On-Device AI Engine

Optimized TFLite models for local threat and NLP classification, ensuring sensitive data never leaves the user's pocket.

Threat Intelligence SDK

Proprietary threat intelligence featuring advanced algorithmic processing.

Safety Setu App

Flagship user application proactively detecting screen-sharing and UPI exploits.

Application Layer

Safety Setu App (Message, UPI & Screen Protection)

Processing SDK Layer

Threat Intelligence SDK (Algorithmic Processing)

On-Device AI Engine

TensorFlow Lite (NLP & Local Classification)

Core Security Foundation

Zero Trust Architecture (Zero Cloud Dependency)

India's Mobile Security Market Opportunity

Targeting a rapidly expanding base of over 800 million smartphone users

TAM

800M+

Total Addressable Market

Over 800 million smartphone users in India actively utilizing digital payments (UPI) and online banking solutions.

SAM

Mobile-First

Serviceable Addressable Market

Focuses specifically on mobile-first households and digitally vulnerable demographics highly susceptible to sophisticated social engineering attacks.

SOM

B2B SDK

Serviceable Obtainable Market

Targets fintech platforms, digital-first banking networks, and mobile safety ecosystems seeking to license and embed secure client-side infrastructure.

Scalable Monetization Models

TenCore is planning monetizes through scalable enterprise SDK licensing, consumer freemium models, and government partnerships.

SaaS & API SUBSCRIPTIONS

B2B Enterprise Model

Our B2B enterprise model is planned to license the Threat Intelligence SDK to fintechs and digital banks via SaaS, per-API-call, or annual subscriptions for real-time fraud mitigation.

FREEMIUM & PREMIUM SUBS

Consumer Freemium

For consumers, the **Safety Setu** app uses a freemium model, offering core family protection for free with premium multi-device monitoring subscriptions.

GOVERNMENT PARTNERSHIPS

Government Partnerships

We also planned to partner with government institutions for regional digital resilience and workforce safety tools.
