

 **MAKE IN INDIA • DEEP-TECH SOVEREIGN AI GRANT PROPOSAL**

TenCore Digital Labs

Sovereign Deep-Tech

Engineering Next-Generation On-Device Edge AI, Indigenous Cybersecurity, and Zero-Trust Platform Infrastructure for India's Next Billion Mobile Users.

VENTURE ENTITY

TenCore Digital Labs Private Limited

Deep-Tech Startup India Recognized

FOUNDER & ARCHITECT

Devendra Vaja

24+ Years Systems & Embedded Architecture

PROPOSAL FOCUS

Startup India Seed Fund / Grant

On-Device Edge AI & DPDP Infrastructure

Deep-Tech Engineering Leadership

TenCore Digital Labs Private Limited — 24+ Years of Embedded Systems, Kernel Drivers & Android Architecture

Devendra Vaja

Founder & Principal Systems
Architect • TenCore Digital Labs
Private Limited

24+ years of deep-tech engineering experience across India, USA, and Japan spanning embedded firmware, kernel device drivers, and native Android platform architecture.

Global Systems Engineering (India • Japan • USA)

24+ years architecting mission-critical, zero-fault software across India, Tokyo (high-security gaming machine device drivers), and the United States — designing high-security digital architectures built for sovereign reliability and scale.

Low-Level Kernel Drivers & Embedded Firmware

Deep-rooted expertise in micro-kernel architecture, hardware abstraction layers (HAL), device drivers, and low-latency on-device processing where resource efficiency and zero crash rates are non-negotiable.

Android OS & Mobile Platform Pioneer (Since 2007)

Engineering Android applications and OS-level customizations since Android's inception in 2007 — bridging low-level OS internals with modern quantized On-Device Machine Learning and Edge Cybersecurity.

SECTION 01 • NATIONAL CHALLENGE & VISION

Mission, Vision & The National Problem

Securing India's digital economy from escalating financial cyber-fraud, foreign cloud dependence, and the vernacular digital divide.

Sovereign Vision & Deep-Tech Mission

Building indigenous, privacy-first on-device intelligence that protects citizens without sending a single byte of private data outside India.

Our Sovereign Vision

VISION STATEMENT

- **India's Leading Sovereign AI Studio:** Establishing India as a global benchmark in privacy-first, on-device Edge Artificial Intelligence.
- **100% Data Sovereignty:** Eliminating reliance on foreign cloud servers for citizen security and fraud interception.
- **Universal Digital Shield:** Ensuring every Indian citizen — regardless of literacy, language, or device cost — is protected against digital fraud.
- **Atmanirbhar Deep-Tech IP:** Building defensible, domestically owned patents and algorithms that power India's banking and digital public infrastructure.

Our Deep-Tech Mission

MISSION STATEMENT

- **Zero-Cloud Telemetry:** Keep 100% of sensitive fraud detection, payment screening, and biometric telemetry strictly on the physical device.
- **Sub-15ms Edge Inference:** Deliver ultra-lightweight, quantized neural models that run seamlessly on low-cost budget smartphones without battery drain.
- **Vernacular Inclusion for Bharat:** Integrate local language audio prompts and TalkBack screen-reading to protect blind, elderly, and rural users.
- **Enterprise Drop-In SDKs:** Provide plug-and-play security SDKs for Indian fintechs, commercial banks, and government digital services.

The Escalating Cyber Threat Landscape in India

India's rapid digitization has created urgent national security and financial vulnerabilities.

1. ₹14,000+ Cr Annual UPI & Scam Losses

Sophisticated social engineering, malicious remote-access APKs, and fake APK overlays bypass traditional SMS and banking OTP safeguards.

2. The Vernacular Digital Divide

Over 600 Million rural, elderly, and non-English-speaking users lack accessible audio security warnings and become easy targets for cyber syndicates.

3. Foreign Cloud & Privacy Vulnerability

Legacy antivirus apps upload contacts, SMS, and screen content to foreign servers, violating India's Digital Personal Data Protection (DPDP) Act.

4. Network Latency & Battery Constraints

Cloud-based fraud filters fail in spotty 4G/2G rural coverage and suffer 500ms+ roundtrip latencies — too slow to stop real-time UPI screen hijacking.

SECTION 02 • INNOVATION & PRODUCTS

The TenCore Deep-Tech Innovation

Proprietary on-device heuristic engine, quantized edge neural models, and modular platform architecture.

Flagship Innovation: Safety Setu Platform

India's first 100% on-device edge cybersecurity engine with zero cloud telemetry and instant UPI screen-share protection.

Real-Time Screen-Share & UPI Interceptor

Autonomously detects and freezes active screen-recording or remote desktop overlays (AnyDesk, TeamViewer) during payment flows.

Universal Inclusion: Blind & Illiterate Defense

Built-in TalkBack audio alerts in Hindi, Marathi, Gujarati, and English give voice warnings before fraudulent transactions occur.

On-Device Malicious APK & Heuristic Scanner

Inspects sideloaded APK permissions, suspicious intent receivers, and phishing links locally in <15ms with 0 KB sent to the cloud.

LAYER 1 • CITIZEN UI

Vernacular Consumer App (TalkBack Audio)

LAYER 2 • B2B SDK

Banking Drop-In Threat Intelligence SDK

LAYER 3 • AI ENGINE (PLANNED)

Quantized On-Device NLP Intent Models (Future)

LAYER 4 • SOVEREIGN OS

Hardware-Level Kernel Heuristics & Zero-Trust

Enterprise Operational Stack: Parking Setu

High-throughput mobile workflows, offline-first transaction queues, and digital asset tracking for luxury hospitality.

High-Throughput Mobile App

Native Android application engineered for high-frequency operations with <5s check-in turnaround, CameraX intake, and QR ticketing.

Sub-5s Check-In

Offline-First Transaction Buffer

Resilient local Room database buffer and background WorkManager sync that guarantees zero lost transactions during internet outages.

100% Offline Resilient

Zero Revenue Leakage Governance

Tamper-proof digital audit trails, timestamped condition logs, and real-time managerial telemetry for complete operational visibility.

Complete Audit Shield

BusinessSetu & InsuranceSetu: Document Intelligence

AI-powered vertical SaaS suite empowering 2.5M+ insurance agents, CAs, and MSMEs with automated document OCR and vernacular CRMs.

InsuranceSetu (Document OCR & Renewal CRM)

Automated ingestion of complex insurance policy PDFs (LIC Premium Due Lists), tabular OCR extraction, multi-lingual WhatsApp renewal nudges, and commission ledgers.

2.5M+ Agent Market

LeadSetu (Offline Visiting Card Vision)

Offline-first camera vision that extracts visiting card contacts in <3 seconds at exhibitions, syncing directly into a Kanban CRM with automated WhatsApp follow-ups.

Sub-3s Lead Capture

Unified Multi-Tenant Core (Setu Engine)

Shared enterprise infrastructure with GSTIN-based multi-tenancy, per-product RBAC, omnichannel dispatchers (WhatsApp/SMS), and DPDP-compliant local data vaults.

Zero-Trust Architecture

Deep-Tech Architectural Superiority

Built on 24+ years of low-level systems engineering — optimized for sub-15ms latency and ultra-low battery consumption.

100% Sovereign Data Privacy

Zero user PII, SMS text, or screen captures leave the device. Fully compliant with DPDP Act 2023 and RBI cybersecurity directives.

Ultra-Low Latency (<15ms)

Local on-device pattern matching executes 20x faster than cloud-based roundtrips, stopping attacks before payment submission.

Minimal Battery Footprint (<0.5%/day)

Event-driven Android Accessibility and heuristic hooks execute only on critical state triggers, preserving battery life.

CLIENT RUNTIME

Native Kotlin / Jetpack Compose & CameraX

EDGE INFERENCE

On-Device Quantized TensorFlow Lite Models

SOVEREIGN STORAGE

Encrypted Local SQLite / Room Vault

INDIA DATA RESIDENCY

Zero-Trust Update Hub (Mumbai / Hyderabad)

Competitive Moat: TenCore vs. Foreign / Legacy Solutions

Direct feature comparison highlighting why TenCore's indigenous on-device architecture is unmatched.

Core Capability	Legacy Global Antivirus	Cloud-Based Caller Filters	TenCore Sovereign Edge
Data Privacy & Transit	Cloud Uploads (Foreign Servers)	Cloud Contact Syncing	100% On-Device (0 KB Sent)
Detection Latency	200ms – 800ms (Network Lag)	Network Dependent (Laggy)	< 15ms Local Execution
UPI Screen-Share Protection	Basic File Scanning Only	Not Supported	Real-Time Payment Intercept
Vernacular Voice Alerts	English Only / Silent Banners	English Caller Tags Only	TalkBack Voice (4 Languages)
Offline Autonomous Defense	Fails Without Internet	Fails Without Active API	100% Offline Autonomous
DPDP Act 2023 Compliance	High Regulatory Risk	Grey Area Contact Scraping	Certified Sovereign Gold Standard

SECTION 03 • MARKET & COMMERCIAL VIABILITY

Market Opportunity & Scalable Business Model

Addressing a ₹60,000+ Crore national market across 750M+ smartphones and 50+ commercial banks.

Multi-Thousand Crore Market Opportunity

India is the world's largest mobile transaction economy with massive untapped cybersecurity demand.

Total Addressable Market (TAM)

750M+ active smartphone users in India, 12B+ monthly UPI transactions, and ₹60,000+ Crore domestic cybersecurity and mobile fraud market.

₹60,000+ Cr TAM

Serviceable Addressable Market (SAM)

250M+ tier-2/3 vernacular digital payment users, 50+ commercial banks, and top 20 payment aggregators requiring drop-in fraud SDKs.

₹15,000+ Cr SAM

Serviceable Obtainable Market (SOM)

15M+ consumer active users, 10+ leading fintech/banking integration licenses, and ₹150+ Crore 3-year capturable revenue opportunity.

₹150+ Cr SOM

Diversified, High-Margin Revenue Engines

A sustainable commercial model spanning high-margin B2B SDK licensing, mass consumer freemium, and public sector partnerships.

Banking & Fintech SDK

HIGH MARGIN SAAS

Drop-in Threat Intelligence SDK for banking apps

₹1.50 – ₹3.00

per MAU / year (or SaaS Tier)

- ✓ Protects UPI banking apps from screen-recording overlays
- ✓ Tiered volume pricing: ₹1.50 to ₹3.00 per active user
- ✓ Ultra-low latency (<15ms) with zero battery friction
- ✓ 100% on-device processing compliant with DPDP Act
- ✓ Standard enterprise SLA with dedicated engineering support

Targeting 50+ Indian commercial banks & fintechs

Freemium Pro Shield

Mass consumer protection for all Indian citizens

Free / ₹999

Free Core + ₹999/yr Pro Shield

- ✓ 100% Free core single-device protection for citizens
- ✓ Pro Shield: Advanced real-time threat heuristics
- ✓ Heuristic UPI payment & screen-share watchdog
- ✓ Instant TalkBack & vernacular spoken audio alerts
- ✓ Zero cloud telemetry: 100% privacy retained on device

Virally scalable through word-of-mouth & trust

Public Sector & Telco

National critical infrastructure deployment

Custom

Ecosystem Partnership

- ✓ State police cyber cells & CERT-In collaboration
- ✓ Telecom VAS bundling as value-added security
- ✓ Preload utility partnership with Indian smartphone OEMs
- ✓ Digital literacy & workforce cyber resilience initiatives
- ✓ Anonymized regional threat signature sharing

Establishing TenCore as national digital shield

5-Year Growth & Projected Revenue Trajectory

Realistic financial scaling backed by B2B banking integrations and growing consumer adoption.

Growth Metric / Year	Year 1 (FY27)	Year 2 (FY28)	Year 3 (FY29)	Year 4 (FY30)	Year 5 (FY31)
Active Consumer Base	500,000	3,000,000	12,000,000	35,000,000	75,000,000+
B2B Banking & Fintech SDKs	3 Pilot Banks	10 Integrations	25 Enterprise	50+ Fintechs/Banks	National Standard
Consumer Freemium ARR	₹ 90 Lakhs	₹ 6.40 Crores	₹ 28.50 Crores	₹ 85.00 Crores	₹ 190.00 Crores
B2B Enterprise SDK ARR	₹ 1.10 Crores	₹ 5.60 Crores	₹ 18.50 Crores	₹ 45.00 Crores	₹ 95.00 Crores
Total Projected ARR	₹ 2.00 Cr	₹ 12.00 Cr	₹ 47.00 Cr	₹ 130.00 Cr	₹ 285.00+ Cr

SECTION 04 • GRANT UTILISATION & IMPACT

Grant Ask, Fund Utilisation & Milestones

Transparent capital allocation for deep-tech R&D, edge testing sandbox, patent filings, and vernacular pilots.

Strategic Fund Utilisation Plan (Grant Scope)

100% aligned with Startup India Seed Fund & MeitY Deep-Tech Grant Guidelines (Strictly for Forward Deployment).

1. Quantized Edge ML & R&D (35%)

Recruiting specialized low-level Android/C++ systems engineers and edge-ML scientists to quantize and optimize TensorFlow Lite NLP models for sub-15ms inference on budget smartphone chipsets.

2. Sovereign Testbed & Hardware Lab (25%)

Setting up an indigenous hardware testbed with 50+ diverse Android device profiles (Lava, Micromax, Xiaomi, Samsung) across Android 8 to 15 to stress-test zero-crash execution.

3. IP Protection, Patents & Audits (20%)

Filing domestic and PCT international patents for on-device screen overlay intercept algorithms, acquiring ISO 27001 / SOC-2 certifications, and formal DPDP Act 2023 legal compliance auditing.

4. Vernacular Field Trials & Validation (20%)

Conducting structured rural and tier-2/3 user trials with 10,000+ citizens across Maharashtra and Gujarat to validate TalkBack voice accuracy and calibrate low-literacy accessibility prompts.

Execution Roadmap: Proven Traction to Grant Scale

Foundational core de-risked via self-funding (M1–M6) — Grant accelerates forward R&D, banking pilots, and national rollout (M7–M18).

MONTHS 1–6
(COMPLETED)

Self-Funded Core Validation

🕒 **Completed** 📦 **₹0 Grant**
(M1–M6) (Self-Funded)

Deliverables:

- › Alpha heuristic fraud & remote APK detector
- › Android Accessibility screen intercept engine
- › 4-Language TalkBack voice prompt framework
- › Sub-15ms on-device benchmark achieved

Status: ✅ 100% Bootstrapped & De-risked

MONTHS 7–9 (GRANT M1)

Quantized Edge ML & SDK

🕒 **Months 7 – 9** 📦 **Grant Phase 1**

Deliverables:

- › Quantized TensorFlow Lite edge model training
- › Drop-in Threat Intelligence SDK for banking
- › Sandbox testing with 2 partner fintechs
- › Developer portal & integration guides

Milestone: First 2 Fintech Sandbox Pilots

MONTHS 10–12 (GRANT M2)

Hardware Lab & DPDP Audit

🕒 **Months 10 – 12** 📦 **Grant Phase 2**

Deliverables:

- › 50-Device multi-OS hardware testbed setup
- › Third-party DPDP Act & CERT-In cyber audit
- › Indian patent office full specification filing
- › 10,000-citizen rural vernacular trial kickoff

Milestone: Hardware Testbed & Certifications

MONTHS 13–18 (GRANT M3–M4)

National Scale & OEM Rollout

🕒 **Months 13 – 18+** 📦 **Grant Phase 3 & 4**

Deliverables:

- › Native iOS Swift on-device security release
- › Smartphone OEM preload & system integration
- › Telecom VAS bundling & state cyber cell tie-up
- › Pan-India commercial rollout (1M+ active users)

Milestone: Nationwide Deployment & Scale

Alignment with National Strategic Missions

Driving tangible national security, data sovereignty, and inclusive digital empowerment.

Direct Societal Impact

INCLUSIVE BHARAT

- **Protecting the Next Billion Users:** Shielding non-English-speaking, rural, and elderly citizens from losing life savings to social engineering frauds.
- **Empowering Visually Impaired Citizens:** TalkBack audio alerts ensure blind users receive spoken warnings before executing compromised transactions.
- **Restoring Trust in Digital Payments:** Eliminating fear of UPI and digital banking in tier-3/rural India, accelerating formal financial inclusion.

Government Mission Alignment

ATMANIRBHAR BHARAT

- **Make in India & Atmanirbhar Bharat:** 100% domestically engineered deep-tech software replacing foreign proprietary antivirus tools.
- **DPDP Act 2023 Sovereign Gold Standard:** Demonstrating that world-class cybersecurity can be achieved with zero citizen surveillance and zero data export.
- **Cyber Surakshit Bharat (MHA / MeitY):** Partnering with law enforcement and CERT-In to build proactive, automated cyber resilience across the nation.

NEXT STEPS & ENGAGEMENT

Join Us in Securing India's Digital Future

TenCore Digital Labs Private Limited is ready to partner with Startup India and Government Innovation Programs to build sovereign deep-tech infrastructure.
