

ARHAM DISPOSABLE

AI-Enabled Smart Tissue Manufacturing &
Sustainable Supply Chain Management

About Us

Transforming conventional tissue manufacturing into an intelligent, connected, and sustainable ecosystem.

Arham Disposal (OPC) Private Limited is developing an AI-enabled smart manufacturing platform for the tissue and disposable hygiene industry. The solution integrates AI-based demand forecasting, IoT production monitoring, digital quality control, inventory optimization, and supply-chain visibility, helping MSMEs improve operational efficiency, reduce waste, and make smarter production decisions.

Our goal is simple make Industry 4.0 intelligence affordable and accessible for growing hygiene MSMEs.

Vision

To make intelligent, connected and sustainable manufacturing accessible to every tissue and hygiene MSME.

Our Focus

Smart Production, AI Forecasting, Quality Intelligence, Inventory Optimization, Connected Supply Chain

From Traditional Manufacturing to Intelligent Manufacturing.

Problem Statement

Growing Demand. Fragmented Operations. Lost Efficiency.

Tissue and hygiene MSMEs are serving a growing market, but many still manage critical operations through disconnected and manual processes.

This directly reflects the problem identified in the submitted concept: the need for an affordable integrated system connecting demand forecasting, production monitoring, quality control, inventory, and supply-chain visibility.

The industry doesn't just need more production capacity it needs intelligence connecting demand, production, quality, inventory, and supply in one ecosystem.

Unpredictable Demand

Manual demand estimation creates production mismatches, resulting in overproduction or stock shortages.

Fragmented Production Visibility

Production, inventory, quality, and supply-chain activities operate without one connected system.

Inconsistent Quality Control

Limited real-time monitoring can lead to quality variations, rework, wastage, and inconsistent output.

Inventory & Supply Delays

Poor coordination between demand, raw materials, production, and distribution creates excess inventory or delayed supply.

Solution

One Intelligent Ecosystem for Smarter Manufacturing

We connect intelligence, automation, and visibility to make tissue and hygiene manufacturing more efficient from demand to delivery.

Predict smarter. Produce better. Deliver efficiently all through one connected manufacturing ecosystem.

AI-Driven Production Intelligence

Forecasts demand from real-time business data to optimize production and prevent overstock or shortages.

Smart Production & Quality

Combines IoT monitoring with digital quality control for greater visibility, consistency, and process efficiency.

Inventory & Supply Chain

Synchronizes inventory, replenishment, and fulfilment to maintain optimal stock and enable faster delivery.

Our Products

A focused portfolio of tissue and disposable hygiene products designed for everyday consumer, commercial, and institutional needs.

1. Tissue Paper Products

Everyday tissue solutions focused on convenience, hygiene, softness, and consistent product quality.

2. Disposable Hygiene Products

Practical single-use hygiene essentials designed to support clean and convenient usage across multiple environments.

3. Institutional Hygiene Solutions

Bulk hygiene-product supply for hotels, hospitals, restaurants, offices, institutions, and organized retailers.

4. Private-Label & B2B Supply

Product manufacturing and supply support for private-label brands, distributors, wholesalers, and other B2B buyers.

From everyday consumption to large-scale institutional demand, we aim to deliver hygiene products quality, consistency, and reliable availability.

What Makes Us Different?

Not another generic ERP a purpose-built intelligence layer for tissue and hygiene manufacturing.

Better hygiene products, smarter manufacturing, and a more reliable supply chain built to scale.

Our innovation lies not in digitizing one process, but in intelligently connecting the entire manufacturing journey.

Quality-Focused Hygiene Products Focused on delivering reliable tissue and disposable hygiene products with consistent quality for everyday	Smarter Demand-Led Production Production planning is aligned with market demand, helping maintain better product availability while minimizing excess stock and waste.
Technology-Enabled Quality & Efficiency AI, IoT and digital monitoring support the manufacturing process to improve quality consistency, production visibility and resource utilization.	Reliable Supply & Distribution Integrated inventory and supply planning enables timely replenishment and dependable product supply for distributors, retailers and institutional buyers.

Why Now?

Hygiene Demand Is Becoming a Permanent Consumption Habit

Hygiene is no longer an occasional requirement it is becoming an everyday expectation across homes, businesses, healthcare, hospitality, and institutions.

Rising Hygiene Awareness

Greater focus on cleanliness, sanitation, and personal hygiene is supporting sustained consumption of tissue and disposable hygiene products.

Expanding Institutional Consumption

Hotels, hospitals, restaurants, offices, and institutions create high-frequency, recurring demand for reliable hygiene supplies.

Growth of Organized Distribution

Modern retail, distributors, wholesalers, and private-label brands are creating broader channels for standardized hygiene products at scale.

Need for Smarter Manufacturing

Growing demand increases the need for better production planning, consistent quality, lower wastage, and dependable product availability the operational gaps the proposed technology aims to address.

Market Opportunity

Business Model

Our business model is built around recurring product demand, diversified B2B channels, and scalable manufacturing partnerships.

Private Label & Contract Manufacturing

Manufacturing and supply partnerships with businesses seeking tissue and hygiene products under their own brands, creating scalable B2B revenue opportunities.

Institutional & Bulk Supply

Recurring B2B orders from hotels, hospitals, restaurants, offices, and institutions requiring continuous hygiene-product supplies.

Fund Utilisation

A focused investment plan designed to move the innovation from concept to a functional, tested, and pilot-ready solution.

Founder

Sonali Suraj Kasture
Founder & Entrepreneur

Sonali leads the venture with responsibility for business strategy, operations, product development, and market expansion, while driving the proposed innovation toward smarter tissue and hygiene manufacturing.

Her focus is to combine product-led growth with technology-enabled manufacturing, building a more efficient, quality driven, and scalable hygiene products business.

Thank You

From predicting demand to delivering quality hygiene products, our vision is to make every step smarter, more efficient, and more sustainable.
